

# Final Grades Settings in D2L

Click on Grades Settings > choose Calculation Options tab > then make sure that you are releasing the final grades to students.

The screenshot shows the 'Grades Area' on the left with a sidebar containing 'Enter Grades', 'Manage Grades', 'Grades Settings' (highlighted with a red box), 'Grades Schemes', and 'Setup Wizard'. Below this is an 'Instructions' section with two bullet points: 'Changing options on this page after grades have been entered for users may significantly alter users grades.' and 'Use this page to set how grade items are calculated in the final grade.'

The main content area is titled 'Calculation Options' and has three tabs: 'Personal Display Options', 'Org Unit Display Options', and 'Calculation Options' (highlighted with a red box). A red arrow points from the 'Calculation Options' tab to the 'Final Grade Released' section. The 'Grading System' section includes three radio button options: 'Weighted' (with an example of a 20% assignments category and an 80% final exam), 'Points' (with an example of 40 total points from assignments and a 200-point exam), and 'Formula' (with a note that grade items use the Points system). Below this is the 'Final Grade Released' section, which is highlighted with a red box and contains the 'Release:' radio button options: 'Calculated Final Grade' and 'Adjusted Final Grade' (which is selected). The 'Grade Calculations' section at the bottom includes 'Ungraded Items' (with 'Drop ungraded items' selected) and 'Auto Update' (with 'Automatically keep final grades updated' checked).
